

(E)JES[®]

Universal JES Management

What is (E)JES?

(E)JES is a system management tool that gives you information to monitor, manage, and control your JES2 and/or JES3 z/OS® JESplex.

With (E)JES, you can:

- Control job processing (hold, release, cancel, and purge jobs).
- Monitor jobs while they are running.
- Browse jobs without printing.
- Control JESplex parameters, initiators, job classes, and job class groups.
- Control printers, punches, functional subsystems, and NJE devices.
- Control your JES SPOOL configuration.
- Monitor and control JES resources.
- Control WLM scheduling environments and resources.
- Control WLM enclaves and z/OS UNIX processes.
- Control the z/OS Health Checker.
- Issue system commands.

(E)JES Entry Panel

```

(E)JES consists of panels that provide immediate and current information about jobs, printers, queues, and resources in a z/OS JESplex. With (E)JES, you can easily access and modify all attributes for jobs, started tasks, TSO users, APPC/MVS transaction jobs, z/OS UNIX processes running anywhere in your JESplex. Simple commands and rapid accessibility not only save you time, but also make interaction with your JES subsystems easy.

Status Display

Benefits of Using (E)JES

Improved Job Management

(E)JES lets you easily manage jobs in your spool. It gives immediate, up-to-date information, such as:

- The status, class, priority, date, and time of a job
- All jobs on a queue, such as input, hold, or output
- Job details no matter where it is in the JESplex
- Reasons a job is delayed
- Output from a job as it is created no matter where the job is running in the JESplex

Improved Output Management

(E)JES displays detailed information about output that is ready to be printed, including:

- The total number of lines to be printed
- Classes the output is assigned to
- Forms needed for printing
- Date the output was created

Improved Resource Management

(E)JES provides an effective way to manage resources.

- Control and manage JESplex parameters, JES-managed initiators (JES2), job classes, and job class groups (JES3)
- Control NJE nodes
- Control and manage WLM resources
- Control WLM enclaves and z/OS UNIX processes
- Control the z/OS Health Checker
- Control and manage system requests
- Reduce problem management time
- Issue system commands

Benefits of Using (E)JES

Improved User Access Control

You can tailor (E)JES to meet the needs of your users and your security requirements. You can control:

- Who can use (E)JES
- Which users can issue (E)JES control commands
- Which users can issue system commands
- For which jobs users can issue commands
- Which columns to display on panels
- Which jobs and output to display on panels

You can implement these controls internally or through the SAF and an external program such as RACF®.

Improved Device Control

With (E)JES, you have a single interface to some of the most important devices on your system:

- Local and remote printers and punches
- Spool partitions and volumes
- JES3 functional subsystems

Improved Automation of Routine Tasks

The (E)JES Application Programming Interface (API) and companion REXX and Java APIs make powerful (E)JES functionality available to programs, allowing users to:

- Create programs to perform routine tasks
- Use installation-written applications to obtain system information.
- Use System REXX to access “smart” tools and commands without TSO/E access.

(E)JES Web

(E)JES Web is a browser-based interface to (E)JES implemented in Java. (E)JES Web has much of the same functionality as (E)JES. Through menu bars, context menus, and dialog boxes, you can monitor, manage, and control your z/OS JESplex.

Right-click a row to access commands.

The screenshot shows the (E)JES Web interface with a table of job status. A context menu is open over a row, listing various actions such as Activity, Alter, Browse, Cancel, DJC, Data Set Status, Display, Hold, Out Desc, Release, Requeue To, Restart, Run, Spin, and Sys Cancel. The 'Browse' option is highlighted.

JobName	JobID	Status	Process	CurStep	NumStep	StepName	JP	MaxComp	Records
ASHENVT2	J0100412	W-OUTPUT	OUTSERV		0		1	CC 0000	2,3
TIVSMPT	J0101002	W-OUTPUT	OUTSERV		13		2	CC 0000	2,3
TIVSMPT	J0103191	W-OUTPUT	OUTSERV		13		2	CC 0000	2,3
TIVSMPT	J0103741	W-OUTPUT	OUTSERV		13		2	CC 0000	2,4

The Primary Selections dialog box contains several sections for filtering job data:

- Display Jobs
- Display STCs
- Display TSUs
- Display ATXs

Fields for Job Names, User IDs, Owner IDs (JOHN), Origins, Job Classes, Destinations, and Sysout Classes are provided. Buttons for Accept and Cancel are at the bottom.

Access dialog boxes via drop-down menus.

Drag and drop to arrange columns.

The Column Arrangement dialog box allows users to manage column visibility and order. It features sections for Hidden Columns, Visible Columns, and Width. Columns like JTYPE, JNUM, and JID are listed in the Hidden Columns section, while JobName, JobID, Status, Process, StepName, JP, MaxComp, Records, Lines, Pages, Bytes, Pos, Mode, and H-OS are in the Visible Columns section.

Right-click to download or extract data.

The screenshot shows the (E)JES Web interface displaying a detailed job status page for TESTTME1 J0853667. A context menu is open over a row, listing options like Download as PDF, Download as Text, Extract DASD, Extract DASD Pattern, Extract Print1, Extract Print1 Pattern, Extract Print2, Extract Print2 Pattern, Extract UNIX, and Extract UNIX Pattern.

The screenshot shows a system command input field with the text: "Enter a system command and press ENTER. Press ESC to dismiss."

Type a slash to enter a system command.

(E)JES Web supports all modern browsers. This includes Google Chrome, Firefox, Opera, Safari, and Internet Explorer 8 or above.

About Us

Phoenix Software International was formed in 1979 and is one of the world's leading systems software development companies. The company offers a suite of software utilities operating on the IBM mainframe platform and personal computers.
