

Attending GSE UK? Don't Miss These Sessions

The 2019 GSE conference will once more be held at Whittlebury Hall Hotel for three full days of intensive education across a broad range of mainframe topics on Tuesday 5 November to Thursday 7 November. Phoenix Software International will be presenting two sessions.

Speaker:

Ed Jaffe

Chief Technology Officer
Phoenix Software International

Sessions:

Building a z/OSMF Workflow-Driven Install

The presenter will discuss how Phoenix Software International developed a z/OSMF Workflow-Driven product install from an existing installation manual. The presenter will describe PSI's installation philosophy and future objectives for z/OSMF-based installs, the actual mechanics (scripts, etc.) used to convert the manual into a workflow, hints and tips for others interested in doing something similar, and (possibly) even live demonstrations of the conversion scripts and z/OSMF workflow results.

z/OS V2R4 User Experience

The presenter continuously installed a new z/OS V2R4 driver every month from December 2018 through September 2019 and experimented with its new functions as they became available throughout that entire time. He will show you how these new functions operate and provides you with warnings, hints & tips, caveats, etc. based upon his experiences.
